"Fiesta"

The "Fiesta" art piece is a colorful and cheerful design that integrates harmoniously with the nearby buildings and the concrete light rail structure. It is executed with a combination of perforated stainless steel panels and powder coated steel rods simulating a natural setting of plant vines.

"Bird of paradise"

A colorful metal design simulating a garden patch of "Bird of paradise" flowers installed on top of the shelter enhances the surrounding green area and creates an attractive visual accent to balance the contemporary architecture of the nearby condominiums and the massive light rail structure in its proximity.
The design is executed with powder coated steel, bolted into the upper frame of the bus shelter structure.
Stems and vines hang downwards at the top part of the existing glass panels allowing for transparency to minimizes the vandalism factor.
