Re: Record search results for the proposed 1210 California Circle project

Dear Mr. Taylor,

Per your request received by our office on July 24th, 2014, a records search was conducted for the above referenced project by reviewing pertinent Northwest Information Center (NWIC) base maps that reference cultural resources records and reports, historic-period maps, and literature for Santa Clara County. Please note that use of the term cultural resources includes both archaeological resources and historical buildings and/or structures.

Review of this information indicates that there have been three cultural resource studies that covered approximately 100% of the 1210 California Circle project area (Basin Research Associates 2000, S-23382; Busby 1999, S-23105; Dietz 1980, S-8368). This project area contains no recorded archaeological resources. The State Office of Historic Preservation Historic Property Directory (OHP HPD) (which includes listings of the California Register of Historical Resources, California State Historical Landmarks, California State Points of Historical Interest, and the National Register of Historic Places) lists no recorded buildings or structures within the proposed project area. In addition to these inventories, the NWIC base maps show no recorded buildings or structures within the proposed project area.

At the time of Euroamerican contact the Native Americans that lived in the area were speakers of the Tamyen language, part of the Costanoan language family (Levy 1978:485). There are no Native American resources in or adjacent to the proposed project area referenced in the ethnographic literature.

Based on an evaluation of the environmental setting and features associated with known sites, Native American resources in this part of Santa Clara County have been found marginal to the San Francisco Bay and its associated wetlands, on the banks and mid-slope terraces above seasonal and perennial waterways and within Holocene age

landforms. The 1210 California Circle project area is marginal to the San Francisco Bay, on the banks of what was Penitencia Creek, is one-quarter mile from Coyote Cree and is within a Holocene age landform. Given the similarity of one or more of these environmental factors, there is a high potential of identifying unrecorded Native American resources in the proposed 1210 California Circle project area.

Review of historical literature and maps gave no indication of the possibility of historic-period archaeological resources within the 1210 California Circle project area. With this in mind, there is a low potential of identifying unrecorded historic-period archaeological resources in the proposed 1210 California Circle project area.

The 1899, 1943, 1953 and 1961 San Jose USGS 15-minute topographic quadrangles fail to depict any buildings or structures within the 1210 California Circle project area; therefore, there is a low possibility of identifying any buildings or structures 45 years or older within the project area.

RECOMMENDATIONS:

1) There is a high potential of identifying Native American archaeological resources and a low potential of identifying historic-period archaeological resources in the project area. Although 100% of the project area has been surveyed, due to the passage of time since one of the previous surveys (Busby 1980) and the changes in archaeological theory and method since that time, only 5% of the project area has been surveyed within the past 25 years (Basin Research Associates 2000, Busby 1999). Therefore, we recommend a qualified archaeologist conduct further archival and field study to identify cultural resources. Field study may include, but is not limited to, pedestrian survey, hand auger sampling, shovel test units, or geoarchaeological analyses as well as other common methods used to identify the presence of archaeological resources. Please refer to the list of consultants who meet the Secretary of Interior's Standards at <http://www.chrisinfo.org>.

2) We recommend you contact the local Native American tribe(s) regarding traditional, cultural, and religious heritage values. For a complete listing of tribes in the vicinity of the project, please contact the Native American Heritage Commission at 916/373-3710.

3) If the proposed project area contains buildings or structures that meet the minimum age requirement, prior to commencement of project activities, it is recommended that this resource be assessed by a professional familiar with the architecture and history of Santa Clara County. Please refer to the list of consultants who meet the Secretary of Interior's Standards at <http://www.chrisinfo.org>.

4) Review for possible historic-period buildings or structures has included only those sources listed in the attached bibliography and should not be considered comprehensive.

5) If archaeological resources are encountered **during construction**, work should be temporarily halted in the vicinity of the discovered materials and workers should avoid altering the materials and their context until a qualified professional archaeologist has evaluated the situation and provided appropriate recommendations. Project personnel should not collect cultural resources. Native American resources include chert or obsidian flakes, projectile points, mortars, and pestles; and dark friable soil containing shell and bone dietary debris, heat-affected rock, or human burials. Historic-period resources include stone or adobe foundations or walls; structures and remains with square nails; and refuse deposits or bottle dumps, often located in old wells or privies.

6) It is recommended that any identified cultural resources be recorded on DPR 523 historic resource recordation forms, available online from the Office of Historic Preservation's website: http://ohp.parks.ca.gov/default.asp?page_id=1069

Thank you for using our services. Please contact this office if you have any questions, (707) 588-8455.

Sincerely,
