

# New Sidewalk and Curb Ramp Request

New sidewalks will be constructed to fill existing gaps and are installed based on usage and as funding permits. When a request for a new sidewalk segment is received, the location is documented, and added to a future project list for consideration when funding becomes available.

Many considerations can be involved in the installation of a curb ramp that can greatly influence the installation schedule and cost, such as the need for obtaining additional right-of-way. Curb ramps are installed at intersections in the city based on usage and as funding permits. When a request for curb ramps is received, the location is documented, and added to a future project list to be considered when funding becomes available.

To request the installation of new sidewalk, curb ramps, or the removal of an existing barrier that limits access in the city right-of-way, please contact:
