Approved By:	Keyvan Irannejad P.E. Chief Building Official
	

Chain link fence that exceeds 7 feet in height shall be designed to resist all loads to which they are subjected, but no less than 3 psf applied perpendicular to the walls. The min. 3 psf load need not be applied simultaneously with wind or seismic loads. The deflection of such walls under a load of 3 psf shall not exceed 1/120.
